

Research Associate in IBRI Diabetes Center

Job Summary

A research associate position at the Indiana Biosciences Research Institute is available in the IBRI Diabetes Center. We are looking for a highly motivated researcher to join the IBRI in a recently established lab for Dr. Jonathan Flak. The goal of this lab is to make progress in obesity and diabetes treatment by understanding the neural mechanisms that control energy expenditure and glucose homeostasis.

The selected candidate will participate in a team working with mouse models for diabetes and obesity, surgical techniques to target groups of cells in the brain, studying these mice following treatments, and developing new molecular tools. A base understanding of neuroscience, metabolism, glucose homeostasis, and/or molecular biology is desired. The selected candidate will help run experiments, manage the mouse colony, and develop lines of research, with support by Dr. Flak.

Responsibilities and Duties

Primary responsibilities include:

- Develop and conduct state of the art scientific experiments working with supervision and independently as projects develop including:
 - Manage the mouse colony
 - Genotyping
 - Immunohistochemistry
 - Animal (mouse) studies
- Accurately document and assist in preparation of data for publication, presentations and grant funding applications
- Work with the team to maintain the supplies, equipment, and institutional requirements for safety and lab operations

Qualifications and Skills

Specific skills and qualifications for the position include:

- Applicant must be hard working, highly motivated, well organized, and able to work with minimal supervision in small group setting.
- Must possess good team skills and be able to efficiently multi-task.
- Must be comfortable working independently in a laboratory setting.
- Meticulous attention to detail, ability to organize well, ability to prioritize and manage time are crucial skills for this position.
- This job requires quantitative skills, the ability to work efficiently, the ability to follow instructions, and maintenance of a reliable and flexible work schedule.
- Must be comfortable working independently in a laboratory setting.
- BS or MA/MS in Neuroscience, Physiology, Biology, Biochemistry, or related field is required
- Must possess basic experience in general biological laboratory work (bench and/or whole animal physiology)
- Minimum 1 year of experience in a research lab
- Experience in neuroanatomy or whole animal physiology is desired
- Experience with molecular biology is a plus
- Experience managing a mouse colony is a plus

Interested individuals should apply at <https://www.indianabiosciences.org/careers/> and are encouraged to provide a brief letter stating your accomplishments and interest in the lab's research, curriculum vitae, and a list of three references.

Compensation

Competitive salary and comprehensive benefits offered, commensurate with experience.

The Organization

The Indiana Biosciences Research Institute (IBRI) is the first industry-inspired applied research institute focused on the discovery and development of innovative solutions to address major health concerns. Our initial focus areas include diabetes, cardio-metabolic disease, and poor nutrition. IBRI is structured as an independent, non-profit organization strategically positioned in Indianapolis: the center of Indiana's vibrant life sciences network of innovators including corporations, academics, and foundations.

IBRI is building an organization of premier entrepreneurial researchers and innovators. We are motivated to create discoveries that transform into solutions that positively impact people's lives. Our mission of "Discovery with Purpose" prioritizes recruiting exceptional talent, building a highly-collaborative culture, and establishing a diverse portfolio of projects and programs supported by industry, government, and philanthropic sources.
